The accompanying notes are an integral part of these condensed consolidated financial statements.

1. Corporate Information

PetroMaroc Corporation plc ("PetroMaroc" or "the Company"), formerly Longreach Oil And Gas Limited is a publicly traded corporation on the TSX Venture Exchange ("TSX-V") under the trading symbol PMA. The Company is engaged in the evaluation, acquisition, exploration and development of oil and gas properties in Morocco with three exploration licences (*Sidi Moktar onshore, Zag onshore, and Foum Draa offshore).* At the June 16, 2014 Annual and Special Meeting, the shareholders of the Company approved the change of the name from Longreach Oil and Gas Limited to PetroMaroc Corporation plc.

PetroMaroc is a Jersey limited company governed by the Companies (Jersey) Law 1991 (the "CJL"). The registered office of the Company is located at Queensway House, St Helier, Jersey, Channel Islands.

The following sets out the operating subsidiaries of the Company and the Company's ownership interest in those subsidiaries:

Name of Subsidiary	Jurisdiction of Incorporation	Ownership
Longreach Oil and Gas Ventures Limited	Jersey, Channel Islands	100%
Longreach Oil and Gas (Canada) Limited	Canada	100%
Longreach Oil and Gas (UK) Ltd.	United Kingdom	100%

2. Basis of Presentation

Statement of compliance
These condensed interim consolidated financial statements have been prepared in accordance with International Accounting Standard ("IAS") 34 Interim Financial Reporting. These condensed consolidated financial statements were authorised for issue by the Board of Directors on November 25, 2014. They do not contain all disclosures required by International Financial Reporting Standards ("IFRS") for annual financial statements and, accordingly, should be read in conjunction with the audited consolidated financial statements for the year ended December 31, 2013.

These condensed consolidated financial statements have been prepared on the historical cost basis, except for the warrants and certain embedded derivatives associated with the equity financing which are measured at their estimated fair value. The condensed consolidated financial statements have been prepared using the same accounting policies and methods as the consolidated financial statements for the year ended December 31, 2013.

Effective January 1, 2014, the Company has adopted the following standards, IFRIC 21 – "Levies", and revisions to IAS 32 – "Financial Instruments: Presentation". The adoption of these standards has not had any impact on the condensed consolidated financial statements and related disclosures.

IFRS 9 will be effective for annual periods beginning on or after January 1, 2018; however, early adoption is available. IFRS 9 is intended to replace IAS 39 - Financial Instruments: Recognition and Measurement. IFRS 9 will address: the classification and measurement requirements for financial assets and liabilities; a new hedge accounting model; and the impairment of financial instruments. The extent and impact of the adoption of IFRS 9 has not yet been determined.

2. Basis of Presentation - continued

On May 28, 2014, the IASB issued IFRS 15 - *Revenue from Contracts with Customers*, a new standard that specifies recognition requirements for revenue as well as requiring entities to provide the users of financial statements with more informative and relevant disclosures. The standard replaces IAS 11 - *Construction Contracts* and IAS 18 - *Revenue* as well as a number of revenue-related interpretations. The standard is effective for reporting periods beginning January 1, 2017. The Corporation did not have revenue as of September 30, 2014, however the Corporation will evaluate the future impact of this standard and the effect on the consolidated financial statements upon adoption.

Going concern assumption

The Company is in the process of exploring its oil and gas properties and has not yet established whether the properties contain reserves that are economically recoverable. The recovery of amounts capitalised for property interests on the consolidated statement of financial position are dependent upon the existence of economically recoverable hydrocarbons, the ability of the Company to complete exploration and/or development of the properties, including related financing requirements and upon future profitable production or, alternatively, upon proceeds from the disposition of the properties. To date, the Company has not earned revenues relative to its costs incurred for exploration activities.

These consolidated financial statements have been prepared on a going concern basis, under which the Company is assumed to be able to realise its assets and discharge its liabilities in the normal course of operations. The ongoing activities are dependent upon its ability to obtain sufficient financing to fund its current and future operations and future acquisition costs. The Company currently has a working capital deficit of $116,063, and commitments due in less than twelve months of approximately $5.1 million including, $1.2 million for estimated Zag penalty costs if the operator does not drill the exploration well by May 2015 (Note 10(b)), $0.9 million for debenture interest costs (Note 6), and $3.0 million for estimated general and administrative costs and continued exploration and evaluation work. ***The Company also has a secured debenture of $9.7 million (CAD) due on April 10, 2016.***

On November 4, 2014, the Company closed a $3.0 million (CAD) private placement (Note 13), in order to fund the working capital deficit, and proceeds from the Offering will be used for near-term general working capital purposes and exploration expenses.

The ability of the Company to meet its commitments and costs is dependent upon raising additional financing by issuing equity securities (which may include a rights offering or private placement), debt financing, or by a partial sale on its working interests with an industry partner. The Company have appointed Dundee Securities as nominated adviser to make recommendations and assist management in assessing the strategic options available, to provide additional capital Company, by way of attracting an industry partner.

As aforementioned above, the Company closed a $3.0 million (CAD) private placement on November 4, 2014. However additional capital is required before February 1, 2015.

Future financings will be required in order to fund the short-term, medium-term and long-term exploration and evaluation program however, there is no certainty that such financings will be obtained on terms acceptable to management. This uncertainty casts significant doubt about the ability of the Company to continue as a going concern. The consolidated financial statements do not reflect adjustments that would be necessary if the going concern assumptions were not appropriate. Should the going concern basis not be appropriate for these consolidated financial statements, then adjustments may be necessary in the carrying value of property and equipment, liabilities, the reported expenses, and the classifications used in the consolidated statement of financial position. Such adjustments could be material.

2. Basis of Presentation - continued

Functional and presentation currency
These condensed consolidated financial statements are presented in United States ("US") Dollars, which is the functional currency. The following are the US Dollar foreign exchange rates at the respective periods:

Currency	September 30, 2014	December 31, 2013	September 30, 2013
Average rate for the period:			
Pounds Sterling	0.5990	0.6395	0.6441
Canadian Dollar	1.0935	1.0298	1.0077
Euro	0.7377	0.7532	0.7573
Moroccan Dirhams	8.1872	8.3287	8.3631
Period end rate:			
Pounds Sterling	0.6157	0.6064	0.6575
Canadian Dollar	1.1156	1.0694	1.0171
Euro	0.7882	0.7263	0.7800
Moroccan Dirhams	8.6508	8.0589	8.3899

Use of estimates and judgments
The preparation of financial statements requires management to make estimates and use judgment regarding the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities as at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. By their nature, estimates are subject to measurement uncertainty and changes in such estimates in future periods could require a material change in the financial statements. Accordingly, actual results may differ from the estimated amounts as future confirming events occur. Significant estimates and judgments made by the management in the preparation of these consolidated financial statements are as follows:

The consolidated financial statements include accruals and provisions based on management's interpretation of the terms of existing licence terms and commitments. Best available information is used to determine the accruals at each period end. The Company is at varying stages of negotiations with certain partners to settle differences in opinion of the obligations of each party under existing agreements. The accruals made by management in this regard may be significantly different from those determined by its partners or amounts agreed to as a result of negotiations. The effect on the consolidated financial statements resulting from such adjustments, if any, may be material and will be reflected prospectively.

i. Costs associated with acquiring oil and natural gas licences and exploratory drilling are accumulated as exploration and evaluation ("E&E") assets pending determination of technical feasibility and commercial viability. Establishment of technical feasibility and commercial viability is subject to judgment which management has determined to be based on the allocation of commercial reserves to the exploration area. Upon determination of commercial reserves, E&E assets attributable to those reserves are first tested for impairment and then reclassified from E&E assets to a separate category within tangible assets referred to as oil and natural gas properties.

ii. Amounts recorded for decommissioning obligations and the related accretion expense requires the use of estimates with respect to the amount and timing of decommissioning expenditures. Other provisions are recognised in the period when it becomes probable that there will be a future cash outflow. In Q4 2013, the Company recorded a decommissioning obligation on the Koba-1 well and in Q1 2014 recorded a decommissioning obligation on the Kamar well, both at Sidi Moktar.

2. Basis of Presentation - continued

iii. Compensation costs recognised for share based compensation plans are subject to the estimation of what the ultimate payout will be using pricing models such as the Black-Scholes model which is based on significant assumptions such as volatility, dividend yield and expected term.

iv. The Company's non-compensation based warrants and the equity conversion feature of the convertible debentures are treated as derivative financial liabilities. The estimated fair value of each is adjusted on a quarterly basis with gains or losses recognised in the statement of operations and comprehensive income/loss. The valuation model is based on significant assumptions such as volatility, dividend yield and expected term.

v. Tax interpretations, regulations and legislation in the various jurisdictions in which the Company operates are subject to change. Therefore, income taxes are subject to measurement uncertainty. Deferred income tax assets are assessed by management at the end of the reporting period to determine the likelihood that they will be realised from future taxable earnings. The Company has yet to record any deferred tax assets or liabilities.

vi. The recoverability of investments are dependent on the liquidity of a private investments shares, which is based in part on its performance. The Company will assess at each reporting period whether there is any objective evidence that a financial asset has been impaired. When the fair value of the investment cannot be derived from active markets, they are determined using recent transactions or a variety of valuation techniques that may include the use of mathematical models. The inputs to these models are taken from observable markets where possible, but where this is not feasible, a degree of judgment is required in establishing fair values. The judgments include considerations of liquidity and model inputs such as volatility. Changes in assumptions about these factors could affect the reported fair value of financial instruments.

3. Restricted Cash

The Company has a restricted cash balance, which represents the following bank deposits securing licences as follows:

	In favor of		**September 30, 2014**		December 31, 2013
Sidi Moktar farm-in arrangement *(Note 10(a))*	MPE	**$**	**2,500,000**	$	2,500,000
Tarfaya licence	San Leon	**$**	**300,000**	$	300,000
Zag exploration licence	San Leon		**600,000**		600,000
Other	Barclays		**19**		27,163
			3,400,019		3,427,163
Current portion of restricted cash			**(2,800,019)**		(327,163)
		$	**600,000**	$	3,100,000

Additional details with respect to the work commitments of the licences are as disclosed in Note 10.

4. Exploration and Evaluation Assets

Balance, December 31, 2013	$	25,476,298
Additions		13,764,303
Impairment		(104,635)
Balance, September 30, 2014	$	39,135,966

Exploration and evaluation assets consist entirely of costs pertaining to licences in Morocco. During the period, the Company entered into formal discussions to transfer its 1.5% working interest in the Sidi Moussa licence, in order to avoid a potential default situation on the forthcoming cash calls. In early October 2014, the Company successfully executed the transfer of its working interest to a partner on the Sidi Moussa licence, following which, the net cost for the Nour-1 well will be $nil. This transfer will be effective upon the approval by the Moroccan authorities (joint Ministerial orders). At September 30, 2014, $104,635 of costs associated with the Sidi Moussa licence were considered to be impaired, as a result of the Company commencing the transfer of the 1.5% working interest on this licence. The evaluation of the technical feasibility or commercial viability of the other licences has not been established. The Company also incurred $30,000 of costs related to a former licence.

During the nine month period, the Company capitalised $112,139 (2013 - $295,810) of administrative salaries and $89,049 (2013 - $151,304) related to share based payments directly related to exploration and evaluation activities on the Sidi Moktar licence.

5. Property and Equipment

Cost		
Balance, December 31, 2013	$	164,248
Additions		14,451
Balance, September 30, 2014	$	178,699
Accumulated depreciation		
Balance, December 31, 2013	$	(49,571)
Depreciation charge		(34,844)
Balance, September 30, 2014	$	(84,415)
Net book value		
Net book value, December 31, 2013	$	114,677
Net book value, September 30, 2014	$	94,284

All of the property and equipment consists of office equipment and furniture and is located in Morocco, Canada and in the United Kingdom.

6. Convertible Debenture

On April 10, 2014, PetroMaroc issued $9.7 million (CAD) of convertible secured debentures (the "Debentures") with an annual coupon rate of 10% maturing on April 10, 2016. The Debentures have a face value of $1,000 (CAD) per debentures, following the first anniversary the Debentures are convertible into common shares at the option of the holder at the greater of $0.30 (CAD) and the market price at the time of conversion based on a 20 day volume weighted average price. The Debenture subscribers were also issued 9,700,000 warrants exercisable at $0.30 (CAD) until April 10, 2016.

On issuance, the Debentures were split between the financial liability and the equity conversion feature (which is classified as a derivative financial liability under IFRS). The financial liability portion was determined by subtracting issuance costs, the fair value of the warrants issued and the fair value of the conversion feature from the principal of the Debenture.

On April 10, 2014, the value classified as convertible debentures liability amounted to $8,583,752 (gross of commissions, legal costs and value attributed to the warrants) and the value classified as a derivative financial liability amounted to $239,638. The fair value of the equity conversion feature is estimated every balance sheet date with changes in the fair value estimate between periods recognized in the consolidated statement of operations and comprehensive income/loss.

The following table summarizes the accounting for the debentures:

	Liability	Derivative Financial Liability	Total
Issuance of Debentures on April 10, 2014	$ 8,583,752	$ 239,368	$ 8,823,120
Fair value of warrants attached	(431,811)	-	(431,811)
Commission of convertible debenture *(1)*	(295,936)	-	(295,936)
Legal costs	(113,645)	-	(113,645)
Accretion and amortization of debt issuance costs	209,645	-	209,645
Derivative gain	-	(95,368)	(95,368)
Foreign Exchange gain	(89,000)	-	(89,000)
Balance at September 30, 2014	$ 7,863,005	$ 144,000	$ 8,007,005

(1) The commission of CAD $315,800 was paid to Euro Pacific Canada Inc., whose Chairman is a Non-executive Director of PetroMaroc.

The liability portion is measured at amortized cost and will accrete up to the principal balance at maturity using the effective interest rate method. The accretion, interest paid and amortization of debt issuance costs are charged to finance expense in the consolidated statement of comprehensive income. The derivative financial liability is measured at fair value through profit or loss, with changes to the fair value being recorded in finance expense.

Finance costs of $632,971 include the accretion and amortization of debt issuance costs of $209,645 and $423,326 of debenture interest.

7. Warrant Value Attributed in Financings

(a) Warrants issued and outstanding

	September 30, 2014		December 31, 2013	
	Warrants	**Amounts**	Warrants	Amounts
Warrants *(i)*				
Opening balance	**-**	**$ -**	10,946,663	$ 33,779
Issued in convertible debenture financing (Note 6)	**9,700,000**	**431,811**	-	-
Exercised - non-compensatory	**-**	**-**	(290,179)	(16,889)
Expired – non-compensatory	**-**	**-**	(9,940,621)	NA
Expired – compensatory	**-**	**-**	(715,863)	NA
Fair value adjustment	**-**	**(328,291)**	-	(16,890)
Balance, end of period	**9,700,000**	**$ 103,520**	-	$ -

(i) Only values related to the non-compensatory warrants have been included in this table and do not include the compensatory warrants included in equity (Note 9(b)).

(b) Each non-compensatory warrant is measured at fair value quarterly using the Black-Scholes options pricing model. The fair value of warrants was estimated using the Black-Scholes options pricing model with the following weighted average assumptions:

	September 30, 2014	April 10, 2014
Number outstanding re-valued warrants, end of period	**9,700,000**	9,700,000
Fair value of warrants outstanding	**CAD$0.095**	CAD$0.048
Risk free interest rate	**1.07%**	1.07%
Expected life	**1.53 years**	2 years
Expected volatility	**65%**	65%

There were no non-compensatory warrants outstanding at December 31, 2013.

8. Decommissioning Obligations

The following table presents the reconciliation of the beginning and ending aggregate carrying amount of the estimated obligation associated with the decommissioning of oil and natural gas properties.

	September 30, 2014	December 31, 2013
Obligation, beginning of period	**$ 752,051**	$ -
Liabilities incurred	**250,000**	750,000
Change in estimated cash flows	**746**	-
Accretion expenses	**10,321**	2,051
Obligation, end of period	**$ 1,013,118**	$ 752,051

The undiscounted amount of cash, required to settle the current decommissioning obligations on the Koba and Kamar wells, adjusted for inflation, is estimated at $1,057,400. The obligations were calculated using a risk free discount rate of 1.50 percent and an inflation rate of 2.0 percent. It is expected that the costs are expected to occur in 2017 but this may be extended following the final results of the Koba-1 and Kamar wells, and an extension of the Sidi Moktar licence.

9. Share Capital

(a) Authorised
Unlimited number of Common Shares without nominal or par value.

(b) Issued

	September 30, 2014			December 31, 2013		
	Issued		**Amounts**	Issued		Amounts
Common Shares						
Opening balance	**81,149,037**	**$**	**50,731,693**	80,829,145	$	50,502,432
Exercise of warrants	**-**		**-**	290,178		206,760
Exercise of stock options	**-**		**-**	29,714		22,501
Balance, end of period	**81,149,037**	**$**	**50,731,693**	81,149,037	$	50,731,693
Warrants (Note 7)						
Opening balance	**-**	**$**	**-**	715,863	$	294,668
Issued pursuant to the convertible debenture financing (Note 6 and 7)	**9,700,000**		**-**	-		-
Expired broker warrants	**-**		**-**	(715,863)		(294,668)
Balance, end of period	**9,700,000**	**$**	**-**	-	$	-
		$	**50,731,693**		$	50,731,693

9. Share Capital - continued

(c) Stock options

The Company has a stock option plan that provides for the issuance to its directors, officers, employees and consultants options to purchase from treasury a number of common shares not exceeding 10% of the common shares that are outstanding from time to time which is the number of shares reserved for issuance under the plan. The options vest at various rates as determined by the Board. The maximum term of the options is five years. The options are non-transferable if not exercised. A summary of the status of the Company stock option plan as at September 30, 2014 and December 31, 2013 and changes during the respective periods ended on those dates is presented below:

	September 30, 2014		December 31, 2013	
Stock Options	**Number of options**	**Weighted average Exercise Price (CAD $)**	Number of options	Weighted average exercise price (CAD $)
Beginning of period	**6,353,425**	**$0.77**	3,133,707	$0.94
Granted	**4,130,000**	**$0.30**	4,145,000	$0.70
Exercised	**-**	**-**	(29,714)	$0.54
Expired/Forfeited	**(3,381,999)**	**$0.71**	(895,568)	$1.03
End of period	**7,101,426**	**$0.34**	6,353,425	$0.77
Exercisable, end of period	**1,549,760**	**$0.89**	1,875,092	$0.96

Date of Grant	**Number Outstanding**	**Exercise Price (CAD $)**	**Weighted Average Remaining Contractual Life**	**Date of Expiry**	**Number Exercisable September 30, 2014**
May 22, 2012	25,000	$0.60	2.64 years	May 22, 2017	16,667
December 21, 2012	139,284	$0.54	0.54 years	April 15, 2015	139,284
December 21, 2012	687,142	$1.18	2.42 years	February 28, 2017	687,142
January 15, 2013	2,120,000	$0.70	3.30 years	January 15, 2018	706,667
April 30, 2014	4,130,000	$0.30	4.58 years	April 30, 2019	-
	7,101,426		3.90 years		1,549,760

10. Commitments and Contingencies

(a) Sidi Moktar Farm-in

On May 16, 2012, PetroMaroc entered into a Farm-in Agreement with Maghreb Petroleum Exploration S.A. ("MPE"). Pursuant to the Farm-in Agreement, PetroMaroc will acquire a 50% interest in the onshore Sidi Moktar exploration licences referred to as Sidi Moktar West, Sidi Moktar South and Sidi Moktar North located in the Essaouira Basin in Central Morocco. In consideration for the acquisition of that interest, PetroMaroc will be responsible for carrying out a work programme of acquiring, processing and interpreting new seismic data and drilling two earning wells by August 28, 2017. The Company has posted a bank guarantee of $2.5 million (Note 3) with respect to this commitment.

(b) Zag licence

Included in restricted cash is $0.6 million related to certain work commitments that need to be completed by May 2015. The Company has committed to its percentage share of further geophysical studies and the drilling of one exploration well. If the operator fails to complete these commitments by May 2015, the Company may be liable for its share of penalty costs, the net cost being $1.2 million. In this event, the $0.6 million of restricted cash will be released to the Company. The Company has also entered into an agreement with the operator whereby if the licence is sold, farmed-out or other triggering event occurs, PetroMaroc may be liable for up to $1.1 million to the operator. This liability has not been recorded at the balance sheet date due to the uncertainty of the triggering event occurring.

(c) Tarfaya licence

Included in restricted cash is $0.3 million related to certain work commitments that were required to be completed by April 2014. The Company committed to its percentage share of further geophysical studies and the drilling of one exploration well however, the operator subsequently failed to complete these commitments within the required licence period. As at December 31, 2013 PetroMaroc accrued an estimated penalty of $1.5 million. During 2014, the Company successfully transferred its 30% working interest to the operator and agreed to reimburse the operator for certain exit costs totaling $0.1 million, which are accrued in these financial statements. In exchange, the Company is no longer liable for the $1.5 million previously accrued penalty provision and as such the Company recorded a $1.4 million recovery in the period ended September 30, 2014. The $0.3 million of restricted cash will be released to the Company.

(d) Sidi Moussa licence

On July 30, 2014, the operator of the Sidi Moussa licence, Genel, spudded the Nour-1 exploration well which is located in 1,000 metres of water approximately 59 kilometres offshore Morocco, targeting Mid-Jurassic / Upper Jurassic reservoirs. PetroMaroc's dry hole exploration well net share of costs were estimated to be approximately $1 million. Prior to entering the potential reservoir horizons, the Company entered formal discussions with the operator and partners on the licence to transfer its 1.5% working interest, in order to avoid a potential default situation on cash calls. In early October the Company successfully executed the transfer of its working interest to one of the partners on the licence, following which, the net cost for the Nour-1 well will be $nil. This transfer will be effective upon the approval of the Moroccan authorities (joint Ministerial orders).

10. Commitments and Contingencies - continued

(e) Office Leases

The Company has the following office lease agreements with monthly costs exclusive of common costs as follows:

Office Location	Currency of Rental Commitment	Total Base Rent Commitment	2014	2015	2016
Morocco	€	9,450	4,050	5,400	-
UK	£	8,000	8,000	-	-
Canada	$	61,022	10,082	40,752	10,188

The United Kingdom office lease arrangement can be terminated on two months' notice. The Morocco lease expires on September 30, 2015. The Canadian office lease arrangement expires on September 30, 2016.

11. Financial Instruments

The Company may hold various forms of financial instruments. The nature of these instruments and the operations expose the Company to credit and foreign exchange risks. The Company manages its exposure to these risks by operating in a manner that minimises its exposure to the extent practical.

(a) Commodity Price Risk

The Company will be subject to commodity price risk for the sale of its production. The Company may enter into contracts for risk management purposes only, in order to protect a portion of its future cash flow from the volatility of petroleum commodity prices. To date the Company has no production and has not entered into any financial instrument exposed to commodity risk.

(b) Market Risk

Market risk is comprised of two components: currency risk and interest rate risk.

(c) Credit Risk

Credit risk is the risk that arises when a party to a financial instrument will be unable to discharge its obligations as they become due. The financial assets exposed to credit risk are cash and cash equivalents, restricted cash, and accounts receivable. Cash and cash equivalents and restricted cash is placed with major financial institutions. The maximum credit risk is approximate to the carrying value of such financial instruments. Management assesses quarterly if there should be any impairment of the financial assets of the Company. At September 30, 2014, none of the financial assets are considered to be impaired.

11. Financial Instruments - continued

(d) Interest Risk
Interest rate risk refers to the risk that the value of a financial instrument or cash flows associated with the instrument will fluctuate due to changes in market interest rates. The Company is not currently exposed to interest rate risk as it borrows funds at a fixed coupon rate of 10% on convertible debentures as disclosed in Note 6.

(e) Foreign Currency Exchange Risk
The Company operates on an international basis and therefore foreign exchange risk exposures arise from transactions denominated in currencies other than USD. The Company is exposed to foreign currency fluctuations as it holds cash and incurs expenditures in property and equipment in foreign currencies. The Company incurs expenditures in Pound Sterling, Euros, Moroccan Dirhams and Canadian Dollars and is exposed to fluctuations in exchange rates in these currencies. There are no exchange rate contracts in place at September 30, 2014 or December 31, 2013.

Assuming all other variables remain constant, a 1% increase or decrease in foreign exchange rates on the foreign cash balances at September 30, 2014 would have impacted the cash flows of the Company during the 2014 fiscal period by approximately $9,600 (2013 - $38,000). A 1% increase or decrease in foreign exchanges on the convertible debenture would have impacted the cash flows of the Company during the 2014 fiscal period by approximately $110,801.

(f) Fair Value of Financial Instruments
The Company classifies the fair value of these financial instruments according to the following hierarchy based on the amount of observable inputs used to value the instrument.

- Level 1 – Quoted prices are available in active markets for identical assets or liabilities as of the reporting date. Active markets are those in which transactions occur in sufficient frequency and volume to provide pricing information on an ongoing basis.
- Level 2 – Pricing inputs are other than quoted prices in active markets included in Level 1. Prices in Level 2 are either directly or indirectly observable as of the reporting date. Level 2 valuations are based on inputs, including quoted forward prices for commodities, time value and volatility factors, which can be substantially observed or corroborated in the marketplace.
- Level 3 – Valuations in this level are those with inputs for the asset or liability that are not based on observable market data.

Cash and cash equivalents and restricted cash have been classified as level 1. The investment in the Aizan convertible debenture and non-compensatory warrants are classified as level 2. The investment in the common equity of Aizan has been classified as level 3.

All financial assets (except for cash and cash equivalents and restricted cash which are classified as FVPL), are classified as either loans or receivables and are accounted for on an amortised cost basis. All financial liabilities are classified as other liabilities other than the warrants attributed to equity financing which are classified as FVPL. The investment in Aizan has been designated as available-for-sale. There have been no changes to the aforementioned classifications during the financial period ended September 30, 2014.

(g) Liquidity Risk
Liquidity risk includes the risk that, as a result of the operational liquidity requirements:

- The Company will not have sufficient funds to settle a transaction on the due date;
- The Company will be forced to sell financial assets at a value which is less than what they are worth; or
- The Company may be unable to settle or recover a financial asset.

11. Financial Instruments - continued

As the Company business plan is very capital intensive, the majority of the spending is related to capital programs. The Company goals are to prudently spend its capital. As circumstances change, liquidity risks may necessitate the Company to issue equity, obtain debt finance, or divest assets. The estimated commitments, in addition to those recorded in the condensed consolidated financial statement and further details of liquidity are discussed in Note 12. The accounts payable have general terms ranging from 30 to 90 days from receipt of the invoice or joint venture billing. The convertible debenture is due on April 10, 2016 (Note 6). Note 2 further discusses the ability of the Company to meet its obligations as they come due.

12. Capital Risk Management

The Company defines capital as total debt and shareholders' equity. The Board's policy is to maintain a capital base so as to maintain investor, creditor and market confidence and sustain future development of the business.

The objectives when managing capital are to safeguard the ability to continue as a going concern in order to pursue the development of its mineral properties and to maintain a flexible capital structure which optimises the costs of capital at an acceptable level of risk.

The Company manages the capital structure and makes adjustments to it in light of the economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new shares, issue debt, acquire, or dispose of assets. In order to facilitate the management of its capital requirements the Company prepares an annual expenditure budget that is updated as necessary, depending on various factors. The Company has not changed its approach to capital management during the current year. The Company is not subject to any external capital restrictions. PetroMaroc will be required to complete debt or equity financing to fund its exploration and development plans.

The Company currently has a working capital deficit of $116,063 and commitments due in less than twelve months of approximately $5.1 million, including $1.2 million for estimated Zag penalty costs if the operator does not drill the exploration well by May 2015 (Note 10(b)), $0.9 million for debenture interest costs (Note 6), and $3.0 million for estimated general and administrative costs and continued exploration and evaluation work. The ability of PetroMaroc to meet these commitments and repay the $9.7 million (CAD) debenture (Note 6) is dependent upon raising additional financing by issuing equity securities (Note 13), or by a partial sale on its working interests with an industry partner. The Company have appointed Dundee Securities as nominated adviser to make recommendations and assist management in assessing the strategic options available to provide additional capital to the Company, by way of attracting an industry partner.

13. Subsequent Events

On October 30, 2014 the Company announced that it intends to complete a non-brokered private placement of units of the Company at a price of 15 cents (CAD) per unit to raise gross proceeds of a minimum of $3 million and a maximum of $6 million (CAD). The units will consist of one common share of the Company and one-half of a common share purchase warrant. Each whole warrant will be exercisable into one common share for a period of 18 months from closing at 30 cents (CAD) per warrant share, provided that if at any time following the date of issuance, the closing price of the common shares on the TSX Venture Exchange is greater than 45 cents (CAD) for 30 consecutive trading days, the Company may give notice to the holders of the warrants that the expiry time of the warrants has been accelerated, and the warrants will expire on the 20th business day following the date of such notice. Holders of warrants are restricted from exercising warrants without the approval of the TSX-V if, as a result of exercise, the holder would hold more than 20 per cent of the issued common shares of the Company. A finder's fee may be payable equal to 3 percent of the gross proceeds received from subscribers introduced to the offering by the finder.

On November 4, 2014, PetroMaroc closed the initial $3.0 million (CAD) tranche of the private placement financing.
